Karamveer Singh Sidhu

Deep Learning Researcher | Building @Tokenbooks
Prince George, British Columbia, Canada

Summary

As a Software Engineer specialized in Web Application Development, I prioritize delivering high-quality work. I am passionate about exploring new destinations and meeting people from different backgrounds, and I aim to utilize my communication, interpersonal, and leadership skills to produce work to the best of my ability. Frequently praised as diligent by my peers, I love programming, am always ready to accept new challenges and embrace learning.

I was also a cadet at the National Cadet Corps and am very fond of the military.

When I'm not working, I enjoy spending time with friends, whether it's catching up over tea, indulging in a fancy dinner, playing sports, hitting the gym, or simply wandering around like a flaneur. I also dabble in drawing as a hobby.

Experience

Tokenbooks

Software Engineer

June 2025 - Present (1 year)

Vancouver, BC

- Built major parts of the payments product, including payment request intake, approval routing, counterparty and payment detail handling, and request-to-payment workflow support.
- Added crypto-to-fiat payment support, enabling requestors to request fiat while treasury teams fund payouts in crypto within the same controlled workflow.
- Built full-stack product features across frontend and backend for Tokenbooks, a Web3 finance platform for wallet and exchange sync, accounting workflows, reporting, and payments.

- Added Excel/XLSX export support for accounting and payment workflows, helping finance teams move from in-product data to close and reporting outputs.
- Contributed to wallet and portfolio sync architecture, improving async job orchestration, status tracking, and reliability across multi-wallet, multi-chain ingestion flows.
- Improved error handling across the product with more structured, type-safe, and user-friendly failures for sync, payments, and operational workflows.
- Implemented Coinbase OAuth and reconnect flows, enabling secure exchange connections and smoother reauthorization and sync experiences.
- Shipped bug fixes and end-to-end product improvements across pages, services, and core user workflows.

University of Northern British Columbia (UNBC)

Graduate Teaching Assistant

September 2024 - June 2025 (10 months)

Prince George, BC

- Designed and delivered lab sessions, for 110+ students teaching statistical concepts and visualization techniques using R and R Commander (RCmdr).
- Created engaging practice tests for interactive sessions, explaining fundamental statistics intuitively.
- Taught advanced statistical modeling and computer science concepts using Python.
- Developed and implemented Jupyter Notebook based labs, demonstrating statistical analysis from scratch.
- Conducted office hours for one-on-one student support, clarifying concepts and assisting with coursework.
- Assisted the instructor with exam invigilation and grading, ensuring fair and accurate evaluation.
- Received a recommendation from the instructor, leading to selection as a TA for STAT 240 due to strong performance.

CloudSEK

2 years 10 months

SDE

July 2022 - August 2024 (2 years 2 months)

Bangalore Urban, Karnataka, India

- Created data visualization components, dashboards & new pages. Did bug fixes & performance

optimizations in the company's most ambitious user facing products, XVigil & SVigil.

- Implemented a chunked upload solution, for uploading an apk file that reduced the upload time by 40 to 50% and bypassed the upload file size limit.
- Quickly developed Exposure Search App in collaboration with other developers that led to 1lakh+ searches & 3000+ new leads for CloudSEK.
- Independently built the frontend of a new product within two weeks, resulting in a successful \$100k deal.
- Created a wrapper to handle timezone, and all date and time related parsing and manipulation requirements on the frontend, removing the need of external libraries.
- Developed a report generator web app in React, that has been used to generate 2000+ reports till date.
- Contributed to the development of the design system components for the in house component library.
- Migrated a Backend Service written in NestJs to mono-repo architecture created with Nx.
- Researched on various CSS writing techniques to find a best optimal CSS implementation for our projects.
- Researched to identify potential enhancements for the search engine optimization (SEO) of BeVigil and devised a comprehensive document for the same.

SDE

November 2021 - June 2022 (8 months)

Bangalore Urban, Karnataka, India

- Created highly performant, reusable, shared React components in Next.js for the revamp of world's first mobile security search engine BeVigil.
- Reduced the MongoDB count query execution time by 88%.
- Created dashboard pages for the admin panel and improved the existing ones by adding new search functionalities, features and more filters. Used Sequelize and React Admin.
- Created and optimized the Docker images for both the frontend and backend services.
- Created new APIs and improved existing ones written in Node.js. Cached computational count query results in Redis.

National Cadet Corps

Air Force Cadet

October 2019 - August 2022 (2 years 11 months)

Punjab, India

I was an NCC (Air Wing) Cadet at 3PB Air Sqn NCC Patiala. Some of the important lessons that NCC taught me were:-

1. Leadership.
2. Ownership.
3. Team Work & Co-operation.
4. Physical & Mental Toughness.
5. Importance of Time Management.
6. Basic Aerodynamics & Flying Experience.

Tutort Academy

Software Engineer Intern

June 2021 - November 2021 (6 months)

- Planned, designed, and developed the company's web app tutort.net by creating flexible, object oriented, reusable components in React using relevant Data Structures.
- Completed the minimum project requirements well on time by prioritizing the important tasks.
- Communicated regularly with the CTO to update the progress, and analyse and gather requirements, considering the customer's perspective and wrote Algorithms to solve various problems.
- Created an eye catching yet simple User Interface for best possible User Experience.
- Deployed the entire app on AWS using Ubuntu Linux EC2 instance by installing the required packages to successfully start frontend and backend servers in Linux on the cloud.
- Used Amazon Aurora PostgreSQL database. Developed a backend server using Node.js.
- Tested the app thoroughly and timely resolved the issues encountered.
- Saved costs by installing free SSL certificate from Amazon Certificate Manager of AWS.
- Improved the SEO learning and using prerender service to respond differently to bots and users.

IndiaGlocal

Young Leader

September 2020 - September 2021 (1 year 1 month)

Khalsa Education and Spirituality

Software Engineer Intern

July 2020 - January 2021 (7 months)

Fatehgarh Sahib, Punjab

- Developed the organization's online e-learning platform (khalsaes.org) from scratch by working closely with team members and added features like search a course, enroll/unenroll in a course, user dashboard, etc.
- Reduced costs by 72% by deploying the website using Amazon EC2 of AWS using LAMP Server on Ubuntu Linux.
- Contributed code to various technical projects undertaken by the organization including but not limited to IOT, Arduino, Raspberry Pi Projects like Face Recognition, Quad-copter Drone, Image Scroller on Raspberry Pi, Home Automation, Bluetooth Controlled Lights, Security Alarm, etc.
- Helped in organizing various National, State, District and College level events to promote education and awareness among students.

Entrepreneurship Cell, IIT Kharagpur

Campus Ambassador

October 2019 - February 2020 (5 months)

Fatehgarh Sahib, Punjab

- Helped in organizing an event in college that saw the maximum attendance of 800 students.
- Promoted and worked towards the successful completion of Global Entrepreneurship Summit 2020.

Indian Institute of Technology, Ropar

Training Course

June 2019 - August 2019 (3 months)

Rupnagar, Punjab

- Worked in a team of 4, on a research paper, aiming for the development of a Face Recognition based food and water serving system, that can be used in hospitals and similar places to help prevent the spread of diseases.
- Successfully completed the task provided to implement Face Recognition on Raspberry Pi using Python and to categorize people into strangers, registered users, and defaulters to provide services to them accordingly.
- Reduced the script execution time by approximately 50% by using images of proper resolution.

Education

University of Northern British Columbia (UNBC)

Master of Science - MS, Computer Science · (September 2024 - June 2026)

Baba Banda Singh Bahadur Engineering College

Bachelor of Technology - BTech, Computer Science · (2018 - 2022)

St. Mary's Sr. Sec. School

Science · (2017)
